PROFESSIONAL EXPERIENCE

Tech For TI + Auto Avaliar

Senior Full Stack Developer

Remote

Sep/2025 to current

Allocated to the client Auto Avaliar, a leading B2B platform in Brazil's automotive market, connecting dealerships and industry players in vehicle trading operations. Working in a high-scale environment, collaborating with multiple teams on the development and maintenance of business-critical systems.

- Fullstack development using **Node.js, TypeScript, React, and PHP**
- Maintenance of legacy systems in PHP, ensuring stability and business continuity
- Application of software engineering principles (**SOLID, DRY, and Design Patterns**)
- Development of APIs and integrations with internal and external services
- Strong focus on **security, performance, and scalability**
- Collaboration with multiple squads in an agile environment
- Active participation in technical decisions and continuous code quality improvement

Metaoriginal

Full Stack Developer and Technical Lead

Remote

Nov/2022 to Sep/2025

- **Complete redesign** of the main application front-end (Ruby + Hotwire Turbo + Stimulus), improving usability and performance without changing the legacy stack.
 - Implementation of automated tests (Jest) to avoid regressions.
- **Strategic mobile app migration**: replacing Flutter with WebView (Ruby + React), reducing maintenance costs.
- **Maintenance and optimization of the corporate website** in WordPress and PHP, ensuring performance, security and content updates.
- **Real-time meeting platform** (Google Meet style) with 4K 3D streaming:
 - **Stack**: Node.js + TypeScript + React + Next.js.
 - **Integrations**: OAuth, PubNub (chat/video) and Dolby (premium audio).
 - **Tests**: Jest for front-end and back-end.
- **System for real estate agents**:
 - **Back-end** Ruby (RSpec) + Flutter (mobile) + Electron (desktop with React/TypeScript).
 - **Firebase** for real-time sync.
- **Internal automation tools** (Electron + Node.js) for build management.
- **Testing culture**:
 - Unit/integration tests in **100% of projects** (Jest, RSpec, E2E tests in Flutter).
 - Documentation of test cases and QA processes.
- **Efficient CI/CD**:
 - Automated pipelines on GitHub (Digital Ocean + Linode).
 - Using GitFlow
- **Cloud**: Deployment and monitoring of applications on **Digital Ocean** + storage on **Linode**
- **Code Standardization**: Guidelines for React, TypeScript, and Ruby, focusing on scalability.
- **Promoted to Tech Lead** in 1 year, leading front-end, back-end, mobile, QA, and 3D integration teams.
- **Agile management** with Scrum and ClickUp (Power User certificate).
- **Responsible for the complete development cycle**: from architecture to deployment, including code reviews (GitHub/GitFlow), CI/CD, and quality assurance.

Ewige

Full Stack Developer

Remote

Feb/2022 to Sep/2023

- **Development and support** for distance learning platforms using Moodle (PHP), Html, Css, JavaScript, serving multiple educational institutions
- **Laravel + React/Next.js Project**: Building Modern APIs and Interfaces
- **Aviation system**: pure PHP development for registration and data management
- **WordPress website maintenance** with custom themes and plugins

- Management of MySQL, SQL Server, PostgreSQL and MariaDB databases
- Creating automated pipelines for data loading (ETL)
- Development of procedures and views for large volume reports (TB+)
- Implementing facial recognition via Azure:
 - JavaScript for image capture
 - PHP for integration with Azure Cognitive Services
 - Complete authentication process via API
- Version control with Git
- Development with Docker

Polisystem

Technical Support

Salvador/Ba
Dec/2021 to Feb/2022

- Specialized technical support for the corporate system in .NET
- Analysis and resolution of problems in production
- Intensive .NET development training for transition to programmer

EDUCATION

Engenharia de Software – UNOPAR

2023 - current

Software Architecture, Requirements Engineering, UML Modeling, Database, Data Structures, Algorithms, Software Testing, Information Security, Basic DevOps.

RELEVANT COURSES

- SOLID – OOP Principles, Udemy (Mar 2023 – Apr 2023)
- Design Patterns – GoF, Udemy (Sep 2022 – Dec 2022)
- Unit Testing and TDD with PHP and PHPUnit, Udemy (Mar 2023 – Jun 2023)
- Basic Scrum Course, Udemy (Jun 2022 – Aug 2022)
- Complete SQL, Udemy (Oct 2021 – Nov 2021)

LANGUAGES

- English: Intermediate B2

PROFESSIONAL SUMMARY

Senior Full-Stack Software Engineer with 4+ years of experience designing and building scalable web applications using Node.js, TypeScript, React, Python, PostgreSQL, and cloud technologies. Experienced in AI integrations (LLMs), REST APIs, distributed systems, authentication, payment gateways, and CI/CD pipelines. Passionate about software architecture, clean code, performance, and delivering reliable products. Seeking remote opportunities with international teams where I can build high-impact software.
